Part 1: Multiple Conditions Using AND (&)

LESSON 7 — QUESTIONS 1–5

Question 1: Movies Released After 2015

Filter the dataset to display only records where:

- type is "Movie"
- release_year is greater than 2015

Store your results in recent_movies_df.

Question 2: Short Action Movies

Find all movies that satisfy both conditions:

- genre is "Action"
- duration is less than 90 minutes

Store the results in short_action_movies_df.

Question 3: American Movies from the 1990s

Filter movies where:

- country is "United States"
- release_year is between 1990 and 1999, inclusive

Store the results in american_90s_df.

Question 4: Long Comedy Movies

Find records where:

- genre is "Comedies"
- duration is greater than 120 minutes

Store the results in long_comedies_df.

Question 5: Recent Horror Movies

Find horror movies released between 2010 and 2020, inclusive.

Use the genre and release_year columns.

Store the results in recent_horror_df.

Part 2: Multiple Conditions Using OR (|)

LESSON 7 — QUESTIONS 6–9

Question 6: Action or Comedy Movies

Filter all records where genre is either "Action" or "Comedies".

Store the results in action_comedy_df.

Question 7: Movies from Two Countries

Find all records where country is either:

- "United States"
- "India"

Store the results in selected_countries_df.

Question 8: Old or Recent Movies

Find movies released:

- Before 1990, OR
- After 2018

Store the results in old_recent_movies_df.

Part 3: Combining AND and OR

LESSON 7 — QUESTIONS 10–13

Question 10: Recent Action or Comedy Movies

Find movies that satisfy both requirements:

- release_year is greater than 2010
- genre is either "Action" or "Comedies"

Store the results in recent_action_comedy_df.

Question 11: Long Movies from Selected Genres

Find movies where:

- duration is greater than 120 minutes
- genre is either "Dramas" or "Action"

Store the results in long_selected_genres_df.

Part 4: Filtering Using isin()

LESSON 7 — QUESTIONS 14–17

Question 14: Multiple Genres

Using isin(), filter records belonging to any of these genres:

"Action", "Dramas", "Comedies"

Store the results in selected_genres_df.
